Study area

Small Islands of Braila
Natural Park (SIBr NP) – a
remnant wetland in Romanian
Lower Danube Catchment

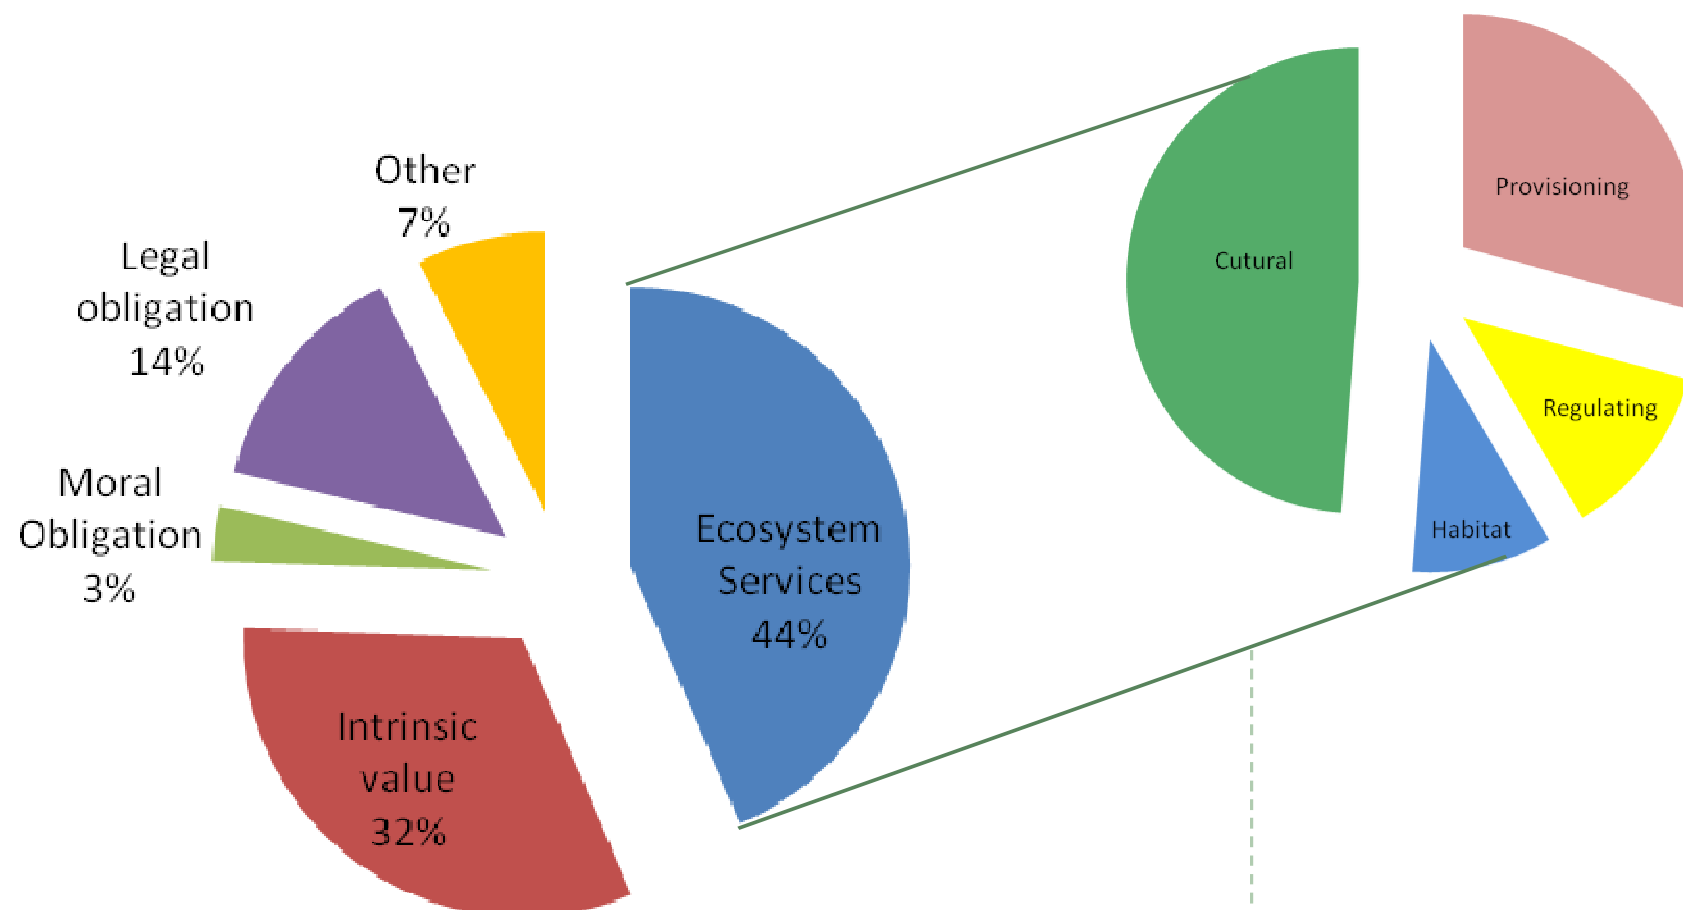

Aim and context of the case study

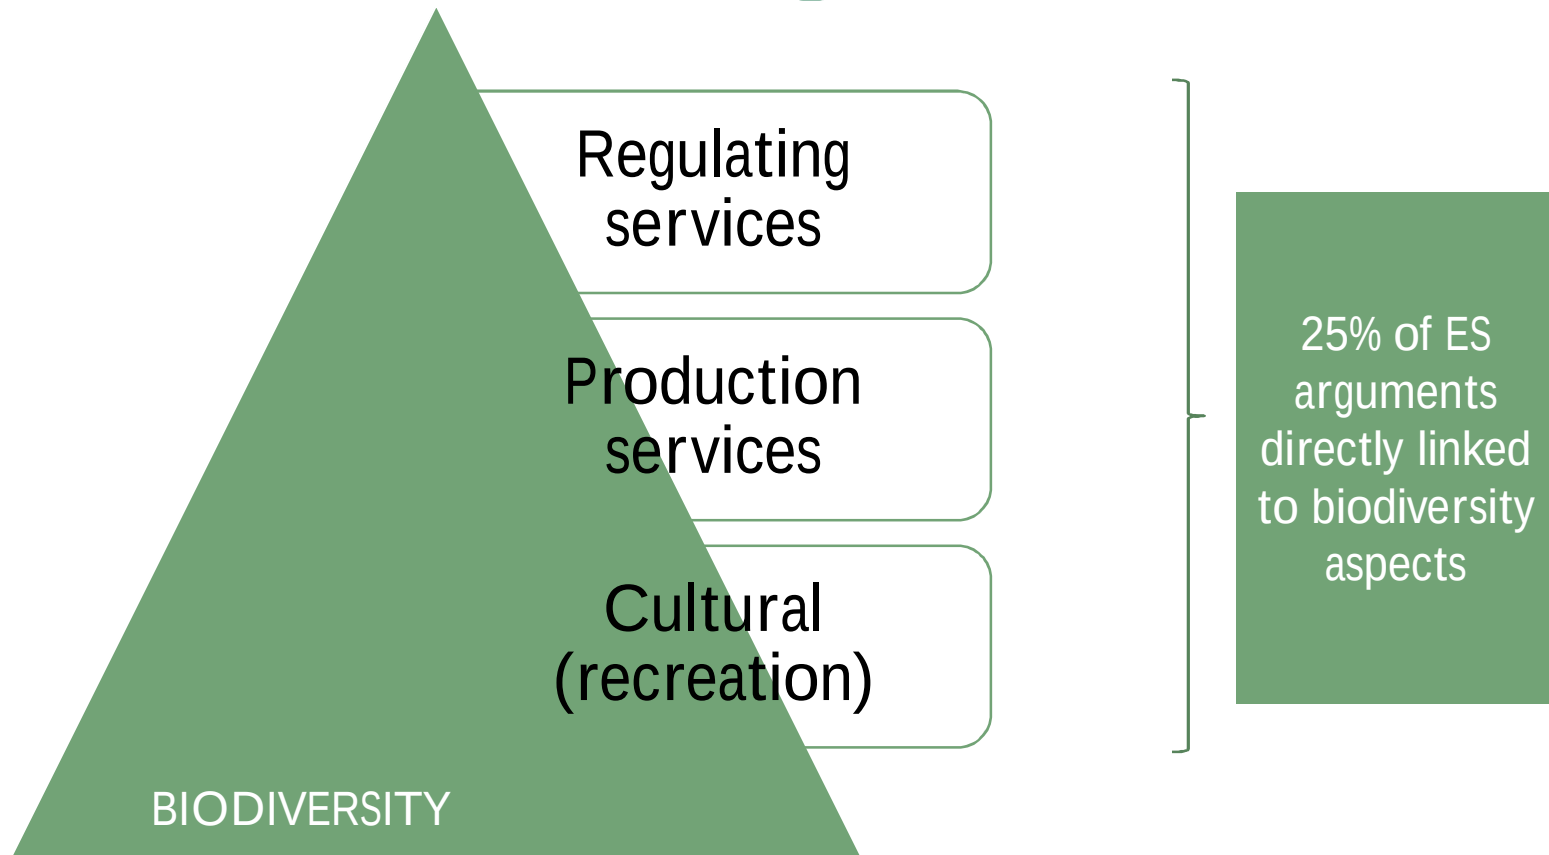

- To investigate how different types of knowledge from multiple sources were included and with what effect in the argumentation process for sustainable management and biodiversity conservation in SIBr - NP.
- We focused on how Ecosystem Services arguments were used in the implementation of the management plan of SIBr - NP
- The context of the case study was determined / created by the processes of achieving the triple current statute of protected area in SIBr (Natural Park, Ramsar and Natura 2000 site)

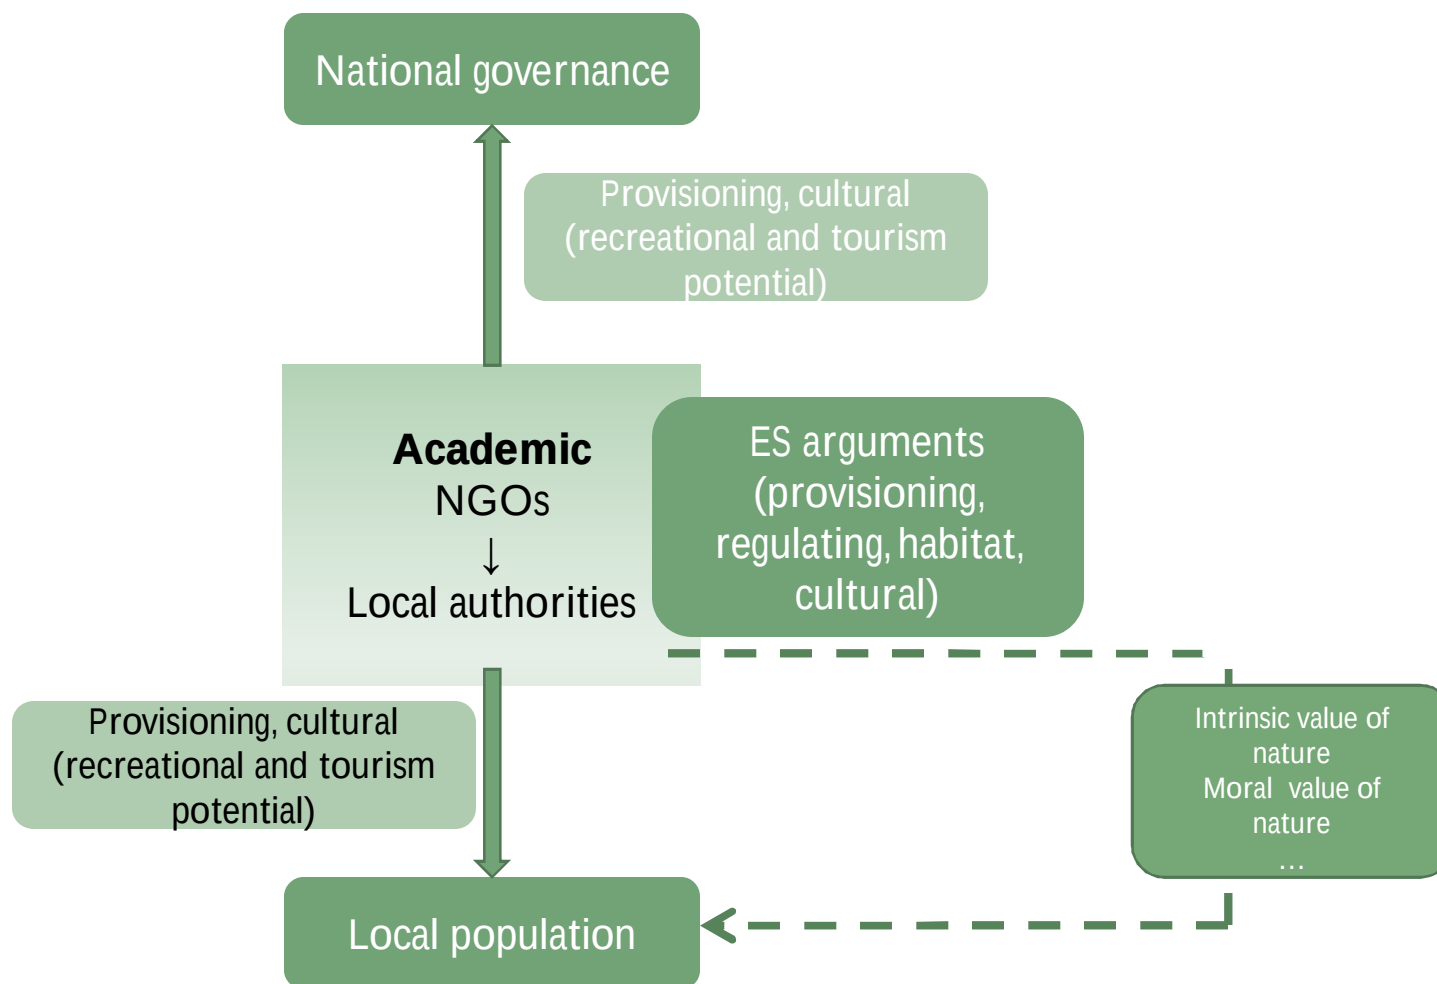

Ecosystem service arguments

ES arguments and biodiversity

Influence of ES arguments on decision making

Availability of knowledge –arguments
